We claim:

1	1. A method of cleaning a c	ylinder of a printing
2	press comprising:	
3	(a) first, placing a cl	eaning fabric supply roll
4	having a strip of cleaning fabric in a	cylinder cleaning system;
5	(b) second, contacting	said strip of cleaning
6	fabric with a low volatility, organic co	mpound solvent which does
7	not-evaporate-readily-at-ambient_temper	ture and pressure and
8	soaking and saturating said strip of cl	aning fabric with said
9	solvent; and	
三11 三11 三二 三 三 二 二 二 二 二 二 二 二 二 1 2 2 2 2 2 2 2 2 2 2	(c) third, cleaning sai	d cylinder with said
년 11	saturated strip of cleaning fabric.	
1	2. The method as defined in	claim 1 further
⊕ 2	comprising the step of winding said use	strip of cleaning fabric
<u> </u>	on a take-up shaft.	
_ _ 1	3. The method as defined in	claim 1 wherein said
可 1 一 2	strip of cleaning fabric is in contact	with said solvent until
並 3	said strip of cleaning fabric absorbs a	measured amount of said
4	solvent such that said strip of cleaning	g fabric is saturated to
5	functional equilibrium with said solven	t.
1	4. The method as defined in	claim 3 further
2	comprising the step of removing said cl	eaning fabric supply roll
3	from said container containing said solv	vent.
1	5. The method as defined in	claim 1 further
2	comprising between steps two and three	the step of removing
	Express Maili: - 33 -	ng Label No. EG297323395US

5	equilibriu	m .							
4	obtain a s	trip o	of clear	ning fab	oric sa	turated	to funct	ional	
3	excess sol	vent f	from sa	id satur	rated s	trip of	cleaning	fabric	to

- of contacting said strip of cleaning fabric comprises dipping only a portion of said cleaning fabric supply roll in a container containing said solvent and rotating said cleaning fabric supply roll in said container to allow at least substantially all of said strip of cleaning fabric to be brought in contact with said solvent prior to being unwound from said cleaning fabric supply roll.
- 7. The method as defined in claim 5 further comprising the step of unwinding said strip of cleaning fabric from said cleaning fabric supply roll prior to bringing said strip of cleaning fabric in contact with said solvent.
- 8. The method as defined in claim 7 wherein said step of contacting said strip of cleaning fabric with said solvent comprises dipping said unwound strip of cleaning fabric through a container containing said solvent.
- 9. The method as defined in claim 8 wherein said step of removing said excess solvent comprises squeezing said excess solvent from said strip of cleaning fabric.
- 10. The method as defined in claim 8 further
 2 comprising the step of storing said removed excess solvent in
 3 said container.

The method as defined in claim 8 further 1 11. comprising the step of storing said removed excess solvent in a 2 separate excess solvent container. 3 1 The method as defined in claim 8 wherein said 12. 2 contacting step comprises using a dippling roller to dip said 3 strip of cleaning fabric into a container containing said 4 solvent. 1 13. The method as defined by claim 12 wherein said 2 removal step comprises using a squeezing roller and a side of 3 said container to squeeze said strup of cleaning fabric. The method as defined by claim 13 wherein a single roller is used to dip said strip/df cleaning fabric and squeeze said strip of cleaning fabric against said a surface of said container. The method as defined by claim 13 further comprising the step of adjusting the gap between said squeezing roller and said side of said container to control the amount of 4 said solvent in said strip of fabric cloth. 1 The method as defined in claim 1 further 2

16. The method as defined in claim 1 further comprising the step of unwinding, said strip of cleaning fabric from said cleaning fabric supply roll prior to bringing said strip of cleaning fabric in contact with said solvent.

17. The method as defined in claim 1 wherein said step of contacting said strip of cleaning fabric comprises dipping at least substantially all of said cleaning fabric supply roll in a container containing said solvent.

Express Mailing Label No. EG297323395US

1	18. A soak on press assembly for use in a printing
2	press cylinder cleaning system for cleaning a cylinder
3	comprising:
4	(a) a low volatility, organic compound solvent
5	which does not evaporate readily at ambient temperature and
6	pressure;
7	(b) soaking means $f \phi r$ soaking and saturating at
8	least a portion of said strip of cleaning fabric;
9	(c) removal means for removing excess solvent
10	from said strip of cleaning fabric and obtaining a strip of
日1 日12 日13	cleaning fabric saturated to functional equilibrium with solvent
<u></u> 12	(d) cylinder cleaning means for bringing said
<u>†</u> 13	saturated to equilibrium strip of cleaning fabric into contact
□ 14	with said cylinder and cleaning said cylinder; and
<u>1</u> 5	(e) take-up means for collecting said strip of
□ 16	cleaning fabric after it has been used to clean said cylinder.
1 4	19. The soak on press assembly as defined by claim 18
₩ 2	wherein said soaking means comprises a container containing said
3	solvent, at least a portion of said cleaning cloth supply roll
4	dipped in said solvent.
1	20. The soak on press assembly as defined by claim 19
2	in which said soaking means further comprises rotating means for
3	rotating said cleaning fabric supply roll to allow said strip of
4	cleaning fabric to be soaked and saturated.

1	21. The soak on press assembly as defined by claim 19
2	further comprising means for removing said cleaning cloth supply
3	roll from said solvent.
1	22. A soak on press assembly as defined in claim 18
2	wherein said soaking means comprises a container containing said
3	solvent, said solvent filled container not in contact with said
4	cleaning fabric supply roll.
1	23. A soak on press assembly as defined in claim 22
2	wherein said soaking means further comprises a dipping means for
3	placing said strip of cleaning fabrig into said solvent stored in
교 출 4	said solvent storage means to soak and saturate said strip of
□ 4 □ 5 □ 1 □ 1	cleaning fabric.
₹ 1	24. The soak on press assembly as defined by claim 23
⊕ 2	wherein said removal means comprises a squeezing means for
<u> </u>	squeezing excess solvent from said strip of cleaning fabric.
T 1	25. The soak on press assembly as defined by claim 24
5 2 立 英 3	wherein said squeezing means and said dipping means comprise a
— 3 [′]	unitary structure.
1	26. A soak on press assembly for use in a printing
2	press cylinder cleaning system comprising:
3	(a) a mounting assembly affixed to said printing
4	press to support said soak on press assembly;
5	(b) a cleaning cloth supply roll comprising a
6	strip of cleaning fabric;
7	(c) at least one container, said container placed
8	in contact with said mounting means;
	Express Mailing Label No. EG297323395US 141669 1 - 37 -

9	(d) a low volatility, organic compound solvent
10	which does not evaporate readily at ambient temperature and
11	pressure, said solvent located in said at least one container and
12	at least a portion of said cleaning cloth supply roll placed
13	within said solvent to soak and saturate said strip of cleaning
14	fabric;
15	(e) at least one squeezing roller operatively
16	associated with said strip of cleaning fabric for removing excess
17	solvent from said strip of cleaning fabric to obtain a strip of
18	cleaning fabric saturated to functional equilibrium with said
<u></u> 9	solvent;
□9 □20 □21 □22 □22	(f) a cylinder cleaning means for bringing said
21	saturated to functional equilibrium strip of cleaning fabric into
	contact with said cylinder to be cleaned and cleaning said
= 23 =	cylinder; and
 □ 2 4 □	(g) a take-up roll means for collecting said
J 25	strip of cleaning fabric.
5	27. The soak on press assembly as defined in claim 26
2	wherein said at least one squeezing roller and said strip of
3	cleaning fabric are operatively associated with said cylinder to
4	remove excess solvent from said strip of cleaning fabric by
5	squeezing said strip of cleaning fabric between said at least one
6	squeezing roller and a surface of said container.
1	28. The soak on press assembly as defined in claim 27
2	wherein said squeezing roller is in a movedly fixed relationship
3	with said container for adjusting the distance between said
	Express Mailing Label No. EG297323395US 141669 1 - 38 -

4	squeezing roller and said surface of said container to control
5	the amount of solvent in said strip of cleaning fabric.
1	29. A soak on press assembly for use in a printing
2	press cylinder cleaner comprising:
3	(a) a mounting assembly affixed to said printing
4	press for supporting said soak on press/assembly;
5	(b) a cleaning fabric supply roll comprising a
6	strip of cleaning fabric, said cleaning fabric supply roll
7	rotatably mounted on said mounting assembly;
8	(c) at least one container;
트 - 9 	(d) a low volatility, organic compound solvent
10	which does not evaporate readily at ambient temperature and
	pressure, said solvent located/in said at least one container;
⊕ 12	(e) a dipper teast partially submerged in said
13 =	solvent, said strip of cleaning fabric adjacent to said dipper so
Ū 14 ⊭	that said strip of cleaning fabric is soaked and saturated in
1 15 €	said solvent;
₩16	(f) a squeezer, said strip of cleaning fabric
17	located within a gap between said squeezer and a surface of said
18	container and in contact with said squeezer and said surface of
19	said container so that said strip of cleaning fabric is squeezed
20	and said excess solvent is removed from saturated cleaning fabric
21	and placed in said at least one container and a strip of cleaning
22	fabric saturated to functional equilibrium is obtained;

23	(g) cylinder cleaning means for bringing said
24	strip of cleaning fabric into contact with said cylinder to be
25	cleaned and cleaning said cylinder; and
26	(h) take-up means for collecting said strip of
27	cleaning fabric.
1	30. The soak on press assembly as defined by claim 29
2	wherein said at least one container is a single container.
1	31. The soak on press assembly as defined by claim 30
2	wherein said dipper and said squeezer consists of a said roller.
1	32. The soak on press assembly as defined by claim 29
2	wherein said squeezer comprises a roller.
1	33. The soak on press/assembly as defined by claim 29
2	wherein said dipper comprises a roller.
1	34. The soak on press/assembly as defined by claim 29
2	wherein said squeezer is in a movedly fixed relation with said
3	surface of said container so that the size of said gap between
4	said squeezer and said surface of said container may be changed
5	so that the amount of solvent in said strip of cleaning fabric
6	may be adjusted.
1	35. A method of presoaking cloth for a cleaning system
2	on site comprising:
3	(a) contacting a strip of cleaning fabric with a
4	low volatility, organic compound solvent which does not evaporate
5	readily at ambient temperature and pressure and soaking and
6	saturating said strip of cleaning fabric with said solvent; and

(b) Wrapping said strip of cleaning fabric to
form a cleaning fabric supply roll; and
(c) engaging said saturated cleaning fabric
supply roll with a printing press having a cylinder to be cleaned
without disposing a heat-sealed plastic sleeve about said fabric
roll and without substantially disturbing the distribution of
said solvent in said fabric roll and detrimentally affecting the
cleaning ability of the fabric.
36. The method as defined in claim 35 further

- 36. The method as defined in claim 35 further comprising the step of removing excess solvent and obtaining a fabric saturated to functional equilibrium.
- 37. The method as defined in claim 36 wherein the step of removing said excess solvent comprises squeezing said strip of cleaning fabric between at least a pair of squeezing rollers.
- 38. The method as defined in claim 36 wherein said steps of contacting and removing are performed after said wrapping step.
- 39. The method as defined in claim 36 wherein said contacting and removing steps are performed prior to said wrapping step.
- 40. The method as defined in claim 39 wherein said contacting step comprises running said strip of cleaning fabric through a container filled with said solvent.
- 41. The method is defined in claim 36 wherein said contacting step is performed by using a dipper to dip the strip of cleaning fabric into a container holding said solvent and said Express Mailing Label No. EG297323395US

4	removing step comprises squeezing said strip of cleaning fabric
5	between said dipper and a squeezer.
6	
1	42. The method is defined in claim 41 wherein said
2	dipper is a roller and said squeezer is a roller.
1	43. The method is defined in claim 35 wherein said
2	contacting step comprises contacting said strip of cleaning
3	fabric with a measured amount of solvent whereby after absorption
4	of said solvent, said strip of cleaning fabric is in functional
5	equilibrium.
1	44. A method for presoaking a cleaning fabric on site
2 	comprising:
	(a) unwinding a strip of cleaning fabric from a
=] 4 ≟	bulk roll;
5	(b) applying a low volatility, organic compound
6	solvent which does not evaporate readily at ambient pressure and
7	temperature to at least one roller;
8	(c) contacting said unwound strip of cleaning
9	fabric to said at least one roller to soak and saturate said
10	strip of cleaning fabric with solven;
11	(d) winding said soaked and saturated strip of
12	cleaning fabric into a cleaning fabric supply roll.
1	45. The method as defined in claim 44 further
2	comprising removing excess solvent from said saturated fabric and
3	obtaining a fabric saturated to functional equilibrium with
4	solvent.
	Express Mailing Label No. EG297323395US 141669 1 - 42 -

Sub 46. A device for soaking a strip of cleaning fabric on 1 site comprising: (a) means for mounting a bylk supply roll having 3 said strip of cleaning fabric wound around a shaft; 4 5 (b) solvent applying means for applying a low volatility, organic compound solvent/which does not readily 6 evaporate at ambient pressure and temperature to said strip of 7 8 cleaning fabric; and 9 means for forming a cleaning fabric supply-(C) roll. 10 The device for soaking a strip of cleaning fabric 47. on site as defined by claim 46 further comprising calendaring means for reducing the thickness and increasing the length of

The device for soaking a strip of cleaning fabric on site as defined by claim 46 further comprising an_excess solvent removing means for obtaining a strip of cleaning fabric saturated to functional equilibrium with said solvent.

said strip of cleaning fabric on said shaft without substantially

increasing the diameter of said cleaning fabric supply roll.

49. The device for soaking a strip of cleaning fabric on site as defined by claim 46 further comprising a squeezer operatively associated with said solvent applying means to squeeze said strip of cleaning fabric between said solvent applying means and said squeezer.

50. The device for soaking a strip of cleaning fabric on site as defined by claim 49 wherein said solvent applying Express Mailing Rabel No. EG297323395US
